LOVE MAY HAVE
ANOTHER
PROTECTOR

LEARN MORE AT PrepFacts.org
PrEP is a newly available HIV prevention strategy, not a cure for HIV.

**PrEP**

Pre-Exposure Prophylaxis is where HIV-negative people take medication to reduce their risk of getting infected with HIV.

**Adherence Matters**

Risk for HIV infection reduced by 92% to 99% among those who take PrEP daily and consistently.

**Safe & Well Tolerated**

Nausea is most commonly reported side effect but typically goes away after first month.

**Coverage**

Most insurance and Medicaid cover Truvada for PrEP with payment assistance program available for those who qualify.
