

# KEEP IT REAL *with* PREP

— LEARN MORE AT —  
***PrepFacts.org***

## PrEP:

Pre-Exposure Prophylaxis is where HIV-negative people take medication to reduce their risk of getting infected with HIV

## Adherence Matters

Risk for HIV infection reduced by 92% to 99% among those who take PrEP daily and consistently

## Safe and well tolerated

Nausea is most commonly reported side effect but typically goes away after first month

## Coverage

Most insurance and Medicaid cover Truvada for PrEP with payment assistance program available for those who qualify

Supported by funding from Gilead Sciences, Inc.

PrEP is a newly available HIV prevention strategy, not a cure for HIV
